

Tim Schwartz

Tim is from Shelby Township, Michigan, a northern suburb of Detroit. Recently graduated from Michigan Tech with a BSME, Tim will be pursuing his Masters in Mechanical Engineering at Virginia Tech. During his time with the Los Alamos Dynamics Summer School he hopes to be exposed to cutting edge engineering technologies and gain research experience for graduate school. Away from his studies Tim enjoys soccer, ultimate frisbee, reading, computers, and biking.

Scott Green

Scott Green, from Davison, Michigan, will be a senior studying Mechanical Engineering at Rose-Hulman Institute of Technology. His academic interests include dynamics (structural and otherwise) as well as biomedical applications. He chose to attend LADSS because he enjoys learning and he wanted to gain experience in a "graduate school" environment. He has not yet decided whether he wants to go immediately to graduate school or to try his hand in industry for a little while. Scott enjoys most athletic or competitive endeavors - most notably baseball, basketball and football. He tries to stay in shape by lifting weights and running, but this high altitude air is hampering things. His future plans consist of being a great father and hopefully living somewhere other than the Midwest.

Do Nguyen

Nguyen is a Hokie at Virginia Tech where he is a rising senior majoring in Mechanical Engineering. His interests include vibrations and fluid mechanics and he will pursue those interests in graduate school. This summer at LADSS, Nguyen and two other students are working on a computational model to detect damage in structures. Born in Vietnam, Nguyen and his family immigrated to the United States in 1987 and settled in Fairfax County, a Virginia suburb of Washington, D.C. On his free time, Nguyen enjoys playing and watching most sports. His favorites include basketball, tennis, and football. Nguyen also likes to hang out with friends and occasionally loiters outside of seedy convenient stores.
