

HECF SIO 2009

Curriculum and
R&D Enabling

Gary Grider, LANL

How can we have a broader educational impact?

- We have had **some** success in getting HECFSIO experts into the classroom.
- We have had **some** success getting a few storage classes mostly by our tight knit community (most of which are present here)
- We have had **some** success with HECURA winners at least claiming inclusion of HECFSIO topics in the classroom
- How can we get rid of the dreaded “**some**” word?
 - Textbooks, national CS curriculum control, summer research experiences for educators, etc.?

Research Enabling

- You told us you needed
 - R&D funding
 - At scale test resources
 - Failure, usage, trace data
 - I/O kernels
 - Workflow / user/application usage info
 - Roadmaps of what the R&D area needs are
- Is this still the right list?
- How are we doing on each?
